THE FARROWsystem®
Patented Method for Removing Surface Coatings

FARROW FLOW® SERIES

The 100% stainless steel control cabinet is super durable and sealed against the elements. It houses the dosing regulators, controls, valves, and guages that monitor the system performance. Intuitive controls are easy to use, reducing training time required to get consistent results.

FLOW® technology is added to the process simply and reliably with patented technology that improves blast consistency and spread. This technology creates a suspension of the media in the vapor utilizing the full output at the nozzle and less work for the operator.

Compressed air is used to pump water for the process from an on-site water source.

Farrow System FLOW® FS1 machines are specifically built for accessibility and portability. Larger 3.5 cu ft. pot to let you blast longer between refills and efficiently designed to keep the weight light.

The pressure pot is a key component of the Farrow System®. Specifically sized for the output of the machine, each pot complies with ASME vessel code regulations Section VIII, Divi-sion One. Each pot is powder coated inside and out to assure maximum reliability and longevity in the field.

SPECIFICATIONS

FARROW FS1 FLOW®	
Dimensions	25.5" X 33.5" X 45.75"
Weight	300 lbs DRY; 650lbs WET
Air Capacity	150 to 120 cfm***
Pot Media Capacity	3.5 cu ft. (5 bags Farrow blast media)
Blasting Pressure	Up To 125 PSI
Hose Length	50 ft. std. (Up to 150 ft. with extension hoses)
Available Accessories	Hose Extension, Blast Nozzle & Holder, Handle Assembly
Patents	EU/3004708 US/20160102797 A1
Warranty	1 Year from the original date of purchase.

*Please see complete warranty for details. ** Specifications subject to change without notice. *** Hose and nozzle size dependent on air supply.

Farrow Crushed glass media must be used to achieve the fastest, most cost effective, and environmentally friendly cleaning possible only with The Farrow System®.
